Vegetable Production Update â€œ September 28, 2018 | NC ... The Vegetable Growers Information Portal was developed to bring together all the resources pertaining to production, management and marketing of tomatoes that a grower will need to be successful. Managing Pests | Vegetable Resources Of the major pests that plague organic vegetable production (weeds, insects and diseases), diseases are by far the most devastating in Texas. Unlike other pests the casual organisms for diseases are microscopic in nature and not visible to the naked eye. As a result, growers often rely on the occurrence of disease symptoms to detect their presence.

Vegetable Insect IPM | University of Maryland Extension Vegetable Insect IPM The University of Maryland Vegetable Program utilizes integrated pest management (IPM) tactics in all of its vegetable production programs whether they are commercial, organic, or home and garden. Key Factors in Vegetable Production | Vegetable Resources Most startup vegetable operations generally fail due to the lack of market development or marketing skills. Consequently, a potential grower cannot spend too much time in a developing production and marketing plan. Commercial vegetable production should always be viewed as a business first and as a farming enterprise secondly.
